

ProLife Global Health Ltd — Website Handover Report by Emma

1 Purpose

This report provides a detailed summary of the **ProLife Global Health Ltd** (活之寶環球健康有限公司) website project — its structure, background, hosting setup, GitHub repository, maintenance workflow, and account details.

It ensures that the company can independently maintain, update, and manage the website going forward.

2 Background

Initiated by: Mr. Ng (Managing Director)

Objective: Create a **low-cost**, **internally maintained**, and **non-promotional** company website.

Previous Platform: Wix.com (paid website + domain hosting)

Current Platform: GitHub Pages (free static hosting — no customer support)

Domain Provider: Wix.com (domain registered as www.prolife-global.com)

 *Mr. Ng's requirements:*

- No SEO (search engine optimization) — the site is for company reference, not public marketing.
- Keep the **existing Wix-purchased domain** www.prolife-global.com.
- Migrate the **website hosting** to **GitHub Pages** to eliminate monthly and annual hosting fees.
- Maintain full ownership and control internally.

Advantages:

- Zero hosting or maintenance costs
- Full internal control over updates
- Fast global content delivery via GitHub's free CDN

Limitations:

- Wix domain remains under Wix's renewal system (annual domain cost applies)

- No backend or database functionality
 - No SEO or advertising exposure (intentionally disabled)
 - GitHub Pages has no live support — self-managed only
-
